The integrative solution: Steam humidifiers as an installation kit

## Electrode or Heater Type – two principles with advantages.

The new HygroMatik steam humidifiers are now also available as an installation kit. Depending on the required steam output and available water quality, you can choose between the electrode or the heater type version. The **SteamKit E** can be operated with tap water and is characterised by lower acquisition costs. The **SteamKit H**, on the other hand, has the advantage that it is almost maintenance-free when using demineralised water.

The high-quality, ready-to-connect components and the well thought-out technology of the SteamKits are convincing due to their simple installation and long service life. This is why numerous well-known manufacturers of climatic cabinets, baking ovens and clean room workbenches rely on the proven quality of our steam humidifier installation kits.
